

# **ECONOMIC IMPACT OF VISITORS IN VIRGINIA 2021**

August 2022

## INTRODUCTION PROJECT BACKGROUND

The travel sector is an integral part of the Virginia economy. Visitors generate significant economic benefits to households, businesses, and government alike and represent a critical driver of the state's future. How critical? In 2021, tourism-supported jobs accounted for 5.2% of all jobs in the state.

By monitoring the visitor economy, policymakers can inform decisions regarding the funding and prioritization of the sector's development. They can also carefully monitor its successes and future needs. This is particularly true for Virginia as it builds upon its tourism economy.

### METHODOLOGY AND DATA SOURCES

An IMPLAN input-output model was constructed for the state of Virginia. The model traces the flow of visitor-related expenditures through the state's economy and their effects on employment, wages, and taxes. IMPLAN also quantifies the indirect (supplier) and induced (income) impacts of tourism. Tourism Economics then cross-checked these findings with employment and wage data for each sector to ensure the findings are within reasonable ranges.

Visitors included those who stayed in overnight accommodations or those who came from a distance greater than 50 miles and deviated from their normal routine.

The primary source of the employment and wage data is the Regional Economic Information System (REIS), maintained by the Bureau of Economic Analysis.

This is more comprehensive than Bureau of Labor Statistics (ES202/QCEW) data because sole-proprietors do not require unemployment insurance and are not counted in the ES202 data.

By establishing a baseline of economic impacts, the industry can track its progress.

To quantify the significance of the visitor economy in Virginia, Tourism Economics developed a comprehensive model detailing the far-reaching impacts arising from visitor spending. The results of this study show the scope of the visitor economy in terms of direct visitor spending, along with total economic impacts, jobs, and fiscal (tax) impacts in the broader economy.

The analysis draws on the following data sources:

- Longwoods International: survey data, including spending and visitor profile characteristics for visitors to Virginia
- Bureau of Economic Analysis and Bureau of Labor Statistics: employment and wage data, by industry
- STR lodging performance data, including room demand, room rates, occupancy, and room revenue, for hotels and short-term rentals.
- AirDNA: short-term rental performance data, including demand and revenue
- Tax collections: Lodging and sales tax receipts
- US Census: business sales by industry and seasonal second homes inventory
- Tourism Economics: international travel data for overseas, Canadian, and Mexican travel to Virginia based on aviation, survey, and credit card information

## ECONOMIC IMPACT METHODOLOGY

Our analysis of the Virginia visitor economy begins with direct visitor spending and analyzes the downstream effects of this spending on the broader economy. To determine total economic impact, we input direct spending into a model of the Virginia economy, constructed using an IMPLAN input-output (I-O) model. The model traces the full extent of industry impacts as dollars flow through the local economy.

An I-O model represents a profile of an economy by measuring the relationships among industries and consumers and quantifies three levels of impact:

- 1. Direct impacts:** Visitor spending creates direct economic value within a discrete group of sectors (such as recreation and transportation). This supports a relative proportion of spending, jobs, wages, and taxes within each sector.
- 2. Indirect impacts:** Each directly affected sector also purchases goods and services as inputs (e.g. food wholesalers, utilities) into production. These impacts are called indirect impacts or supply-chain effects.
- 3. Induced impacts:** Lastly, the induced impact is generated when employees whose wages are generated either directly or indirectly by visitor spending spend those wages in the local economy. This is called the induced impact or income effect.

The Tourism Economics model calculates these three levels of impact - direct, indirect and induced - for a broad set of indicators, including:

- Spending
- Wages
- Employment
- Federal Taxes
- State Taxes
- Local Taxes

## ECONOMIC IMPACT FRAMEWORK

### DIRECT IMPACTS

Tourism's contribution measured visitor spending

RETAIL

ENTERTAINMENT/REC

FOOD & BEVERAGE

TRANSPORTATION

LODGING

### INDIRECT IMPACTS

Purchases of inputs from suppliers  
Suppliers' own supply chains

SUPPLY  
CHAIN  
EFFECTS

B2B GOODS &  
SERVICES  
PURCHASED

### INDUCED IMPACTS

Consumer spending out of  
employees' wages:

INCOME  
EFFECT

HOUSEHOLD  
CONSUMPTION

### TOTAL IMPACTS

Direct, indirect, and  
induced impacts

SALES

GDP

JOBS

INCOME

TAXES

## APPENDIX

### Glossary – Spending Definitions

Term	Description
<b>Lodging</b>	Includes visitor spending in the accommodation sub-sector. This includes food and other services provided by hotels, rentals and similar establishments.
<b>Food and beverage</b>	Includes all visitor spending on food & beverages, including at restaurants, bars, grocery stores and other food providers.
<b>Recreation</b>	Includes visitor spending within the arts, entertainment and recreation sub-sector.
<b>Shopping</b>	Includes visitor spending in all retail sub-sectors within the local economy.
<b>Local transport</b>	Includes visitor spending on local transport services such as taxis, limos, trains, rental cars, buses, and the local share of air transportation spending.
<b>Service stations</b>	Visitor spending on gasoline.
<b>Second homes</b>	Where applicable, spending associated with the upkeep of seasonal second homes for recreational use as defined by the Census Bureau.

### Glossary – Economic Impact Definitions

Term	Description
<b>Direct Impact</b>	Impacts (business sales, jobs, income, and taxes) created directly from spending by visitors to a destination within a discreet group of tourism-related sectors (e.g. recreation, transportation, lodging).
<b>Indirect Impact</b>	Impacts created from purchase of goods and services used as inputs (e.g. food wholesalers, utilities, business services) into production by the directly affected tourism-related sectors (i.e. economic effects stemming from business-to-business purchases in the supply chain).
<b>Induced Impact</b>	Impacts created from spending in the local economy by employees whose wages are generated either directly or indirectly by visitor spending.
<b>Employment</b>	Jobs directly and indirectly supported by visitor activity (includes part-time and seasonal work). One job is defined as one person working at least one hour per week for fifty weeks during the calendar year.
<b>Labor income</b>	Income (wages, salaries, proprietor income and benefits) supported by visitor spending.
<b>Value Added (GDP)</b>	The economic enhancement a company gives its products or services before offering them to customers.
<b>Local Taxes</b>	City and County taxes generated by visitor spending. This includes any local sales, income, bed, usage fees, licenses and other revenues streams of local governmental authorities – from transportation to sanitation to general government.
<b>State Taxes</b>	State tax revenues generated by visitor spending. This will include sales, income, corporate, usage fees and other assessments of state governments.
